

## The Soap Kitchen. Instructions for using Crystal (JS) Soap Base

1. Remove Crystal JS from the container.
2. Cut into smaller pieces, to help with the melting process.
3. Add to a suitable melting vessel (we recommend covering the vessel / tub whilst heating to maintain moisture levels in the base) can be heated in a microwave for 8-10 seconds at a time until melted or gently heated on a hob.
4. Gently heat the product to the recommended melt temperature of 85c / 185f, avoid aerating the product as air bubbles can become trapped within the product.
5. Once melted add fragrance, dye and any additions you wish. Gently and evenly mix your ingredients into the base.
6. Gently pour the product into moulds, tubs, or onto layer with other Stephenson Crystal Soap Bases.
7. Allow product to solidify.

NB- Please bear in mind this product is soft / jelly and as such will need protecting in transportation and covering in-store conditions.

### **EXAMPLES OF WHAT CAN BE ACHIEVED WITH CRYSTAL JS**

*Below are some examples of products made using Crystal JS*
